A Utah Animal Feeding Operation

- Many people have never seen a dairy operation up close
- They know that milk and cheese comes from a dairy
- The dairy aisle in the grocery store may be the closest they have ever come
- So today, we are bringing the dairy to you!

A Utah Animal Feeding Operation

- People not only associate dairies with milk and cheese; but with odors and flies – **and manure**
- Manure can get into rivers and lakes - that can't be good!
- So people like myself gather around tables in offices all over the country to plan, strategize, and come up with ways to keep the manure out of the water
- Policies are written and rules are established

A Utah Animal Feeding Operation

- While planner's plan and strategize
- The dairyman is on his tractor, or in the milk barn, or elsewhere on the farm
- With no knowledge that we are helping them!
- We eventually show up with our plans in hand and give them the good news that we are there to help.

Let me introduce to you
A Utah dairyman

**Welcome to a day in the
life of Mr. Grant Kohler,
Dairyman in Heber
Valley, Wasatch County.**

CHEESE

VIERNES. PM.

Penicilina

A Utah Animal Feeding Operation

- After we have made enough progress with manure and water quality, it is time to:
 - Help with Pesticides
 - Help with Oil tanks and storage
 - Help with Air Quality
 - Help with record keeping
 - Help with mortality

HELP!

What Else?

- Active in the Dairy Council
- Local EMT
- New Business – Cheese and Raw Milk
- Interviews and tours of facility
- Employee responsibilities – training
